- 20 years of experience and proven efficacy
- Cost-effective method for pet owners needing to treat larger numbers of animals

PHARMAQ Ivermectin Drops 0.1%

Spot-on for the topical treatment of mites and lice in caged birds and small companion animals. This formulation contains Ivermectin, which is a highly effective broad-spectrum anti-parasitic compound.

Target Species

Cage birds and small domestic pet mammals e.g. mice, gerbils and hamsters .

Application and Dosage Guide

Apply one drop per 60 g bodyweight on the back of the neck, between the shoulder blades. Apply the appropriate dose once per week for three weeks. Observing this treatment regime is important as it will help ensure that the life cycle of the parasite is broken i.e. will prevent recruitment from any unhatched eggs that may be present on or around the animal when the initial treatment was applied.

| BODYWEIGHT | AMOUNT TO USE |
|------------|---------------|
| 60 g | 1 drop |
| 125 g | 2 drops |
| 250 g | 4 drops |
| 500 g | 8 drops |

For routine prevention of common ectoparasites, this dose can be repeated monthly on a prophylactic basis.
